
EXPERIMENTAL WORKSHOP

In 2005, the JINR Experimental Workshop manufactured products to an amount of 92.6 million roubles, including 23.2 million roubles on the orders of JINR.

Among JINR customers the main client was the Dzhelepov Laboratory of Nuclear Problems. A large amount of work was implemented in its orders for the ATLAS facility — girders-suspension brackets for muon chambers, girders for muon system, etc. According to the programme of the IBR-2 modernization for the Frank Laboratory of Neutron Physics protective reflectors were manufactured — fixed and rolling ones — and other equipment. Other JINR customers were LPP, VBLHE, FLNR and the Maintenance Department.

In the framework of JINR international cooperation, work was continued to produce and install coils for the barrel toroid and end-cap toroid of ATLAS for CERN.

Prominent among alien customers was the Scientific Production Centre Aspekt. Much work was performed for this centre in producing the equipment for the control of unendorsed radioactive materials' travel. Equipment for the total cost of 29.4 million roubles was manufactured on the centre's orders.

Other customer companies were Dinistor, Doza, Tenzor, Magistr Business Centre.

A total of more than 50 organizations of various sectors of the national economy placed their orders at the Experimental Workshop of JINR in 2005.
