
EXPERIMENTAL WORKSHOP

In 2007, the JINR Experimental Workshop manufactured products to the amount of 142198.3 thousand roubles. It is 37.8% more than in 2006. Products on JINR orders amounted to 16198.1 thousand roubles. This figure is 17.8% more than the level of 2006.

Among JINR customers the main client was the Laboratory of Neutron Physics. The following products were manufactured on its orders: driving systems with automatic valve, reflector parts with haulage and stationary shield, parts and components of an X-ray detector, amounting in total to 18258.6 thousand roubles.

The orders for 7194.0 thousand roubles were fulfilled for the Laboratory of Nuclear Problems. Among them were: parts and components for the «ATLAS» farm, parts and components for the «LEPTA» facility, a gaseous detector, a liquid nitrogen trap, parts for a

vacuum system. LHE, LNR, LPP also placed their orders in EW in 2007. The work on the contract with CERN was accomplished.

As before, much work was done for enterprises of different industries. The largest customer among them remained SPC «Aspekt», on whose orders products were manufactured to the amount of 91741.9 thousand roubles. Mainly, it was equipment for the control of illegal radioactive materials traffic. The double increase in the products manufacturing for SPC «Aspekt» allowed a considerable wage growth for the EW staff and, thus, fostered to keep the qualified staff in the department.

The department continued its cooperation with a number of other enterprises that were JINR customers in recent years.
